# TENACE

We are more than a services company; we create solutions, relationships, and opportunities for our clients, partners, and employees.

Tenace is a technology consulting firm and a driver of today's technology innovation. We assist customers with their complex challenges in cybersecurity, infrastructure and software architecture. Our solutions are strategically positioned to have a positive impact on your organization and the community.

Our team excels at creating relationships and understanding challenges to work together to achieve desired outcomes.

Our company prides itself on our overarching principle of compliance. As such, we have taken all steps to make sure we have solid background and knowledge in government contracts accounting and compliance, including robust and fully implemented internal controls that meet FAR, DFARS and CAS criteria.

## Agencies we have helped:

### Department of Transportation:

- Provided vulnerability management to reduce known vulnerabilities in more than 97% of the current threats found. Also, helped the agency understand where the gaps were and made sure the vulnerabilities would be solved in the required time threshold.
- Obtained authority to operate (ATO's) with limited risk.
- Helped the agency best utilize resources like CSAM to manage plans of actions and milestones.
- Improved reporting capabilities by creating new reports that were useful and actionable and helped upper management make better informed decisions.

### Department of Justice:

- Managed a Splunk instance to make sure events are recorded and reviewed.
- Assisted with Splunk reporting to facilitate cross team collaboration in the pursuit of ATO's.
- Utilize Splunk to better understand the vulnerabilities and how to approach the remediation.
